

About U-Boat Worx

"Something manoeuvrable, safe, comfortable and more economical than old-fashioned submersibles". With this philosophy in mind, U-Boat Worx was founded in the Netherlands in 2005 with the objective of creating what is now known as the C-Questers. The first remarkable single-seat submersibles, the C-Quester 1, was launched in the very same year. The digit represents the number of occupants.

The company has since become one of the world's largest manufacturers by specialising in the design and construction of small submersibles. U-Boat Worx's main focus is currently on producing the C-Quester 3 (launched 2008) and the C-Quester 2 (launched in 2009). They are all certified to dive down to a dazzling 100 metres/330 feet.

The record-breaking manufacturer is committed to building its submersibles in small series, thereby reducing cost and lead times to acceptable levels. A dedicated team of 15 full-time employees, which includes engineers, technicians, purchasers and support staff, continuously caters to the demands of the company's clients.

U-Boat Worx takes great pride in creating these very versatile craft, which can be used for various purposes. The C-Quester submersibles are operated from yachts, in tourist ventures, for research missions and for private recreation. All C-Quester models are certified by the esteemed Germanischer Lloyd. This classification society oversees the design, construction and testing in order to achieve the highest possible safety standards for submersibles.

U-Boat Worx' submersibles stand out in terms of their reliability, spacious and luxurious interior, powerful air conditioning system, small size, low weight and low lead times.

Our highly skilled team is devoted to its task of building these state-of-the-art diving machines and is eager to support its client during the acquisition, construction and ownership of their submersible.
